DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 12/27/2006 has been entered.

Allowability Withdrawn

2. Claims allowed in the Office Action of 11/2/2006 have been withdrawn in view of the newly uncovered prior art. A complete action on the merit follows:

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 2, 7, 9, 15, 19, 21-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Moreno (US 20040053044A1).

Art Unit: 1772

Moreno relates to a laminate sheet comprising a plurality of adhesive sheet portions (20) having a predetermined form, formed from an adhesive sheet laminated on a long release sheet (12, coated with LAB, paragraph-[0027]), and a protective member (18) laminated on the long release sheet. The protective member is thicker than said adhesive sheet and is provided longitudinally on the release sheet and spaced apart from the adhesive sheet (figure-3) portions so as not to overlap said adhesive sheet portions. The adhesive sheet portions are provided longitudinally in a central portion of the release sheet (figure-3) and the protective member is provided on both side portions of said release sheet in the direction of the width of the release sheet. It is well known in the art to provide the LAB on a release sheet, when the adhesive sheet is formed into a roll.

For claim 7, the adhesive sheet comprises a base material of a resin sheet (paragraph-[0023]).

For claim 15, it has not been given any patentable weight because it is directed to an intended use and is not a positive limitation.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1772

6. Claims 4-6, 16-18, 20, 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moreno.

Moreno, as discussed above, fails to teach that the protective member is shaped to intrude between the adhesive sheet so as to partially overlap the adhesive sheet.

However, figure-1 of Moreno is interpreted to partially overlap the adhesive sheet as the thicker edge portion overlaps the side edge of the adhesive sheet. The shape of the edge member appears to be a straight line and not intruding between the adhesive sheet portions. Therefore, it would have been obvious to one having ordinary skill in the art to modify Moreno's thicker edge member to have a shape such that it intrudes between the adhesive sheet portions because it would have involved a mere change in the shape of the component. A change in shape is found to be within the level of ordinary skill in the art.

For claim 5, the edge member can be 2-20 mils (paragraph-[0018]).

For claim 6, the surface of the overlapping part is not more than 50% of the surface area of the adhesive sheet (because the edge of the adhesive sheet appears to be not more than 50% of the surface area of said sheet).
